

基於可見光廣播技術之電子相框製作

組員:

黄耀德、李福軒、鍾葉霖、趙彥宇

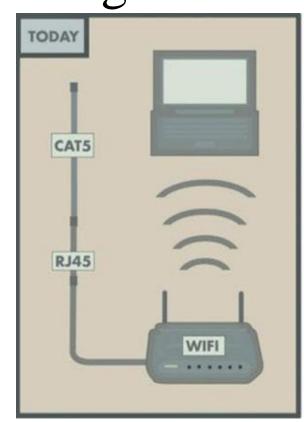

可見光通訊

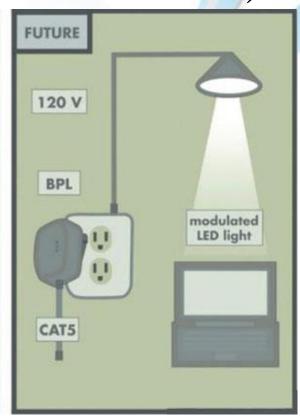

至東技術學院 電子工程系

Oriental Institute of Technolog

VLC(Visible Light Communications)

- 容易架設
- 無電磁波
- 兼顧照明
- 保密性
- 省電

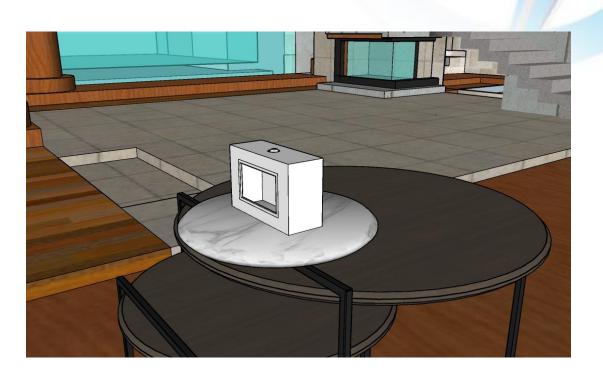

電子相框

• 顯示數位圖像的小型顯示器

- 節省紙張
- 方便攜帶
- 體積小
- 重量輕

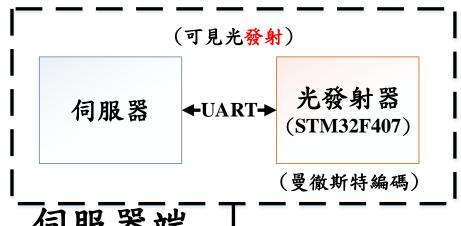

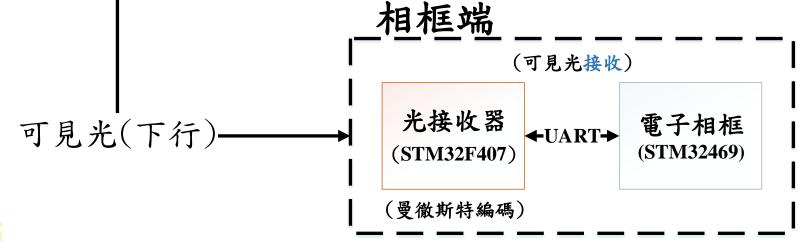

系統架構

亞東技術學院 雷子工程系

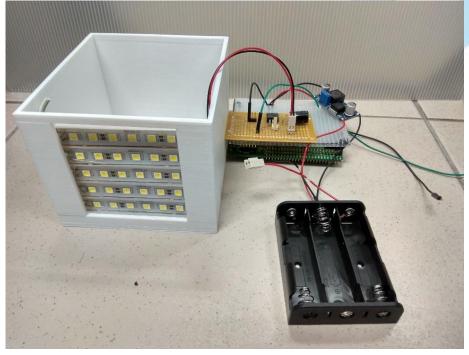

光發射器

亞東技術學院 電子工程系 iental Institute of Technology

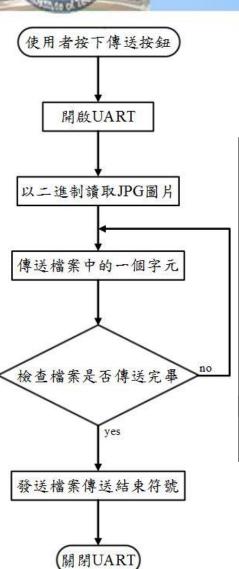

伺服器端檔案發送

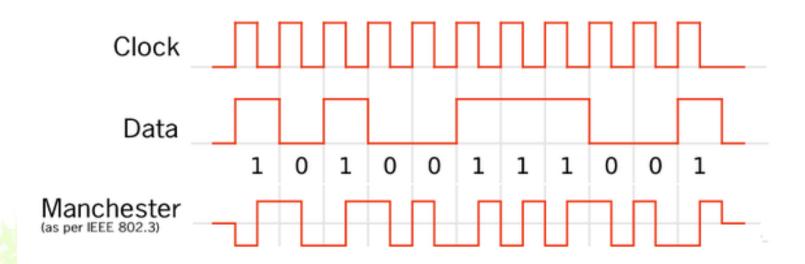

```
def transmmit(self):
    try:
        ser = serial.Serial(comP.get(), baudrate = Baud.get(), timeout = 0.5)
        dataFile = open(File, 'rb')
        size2read = 1
        data2send = dataFile.read(size2read)
        while len(data2send) > 0:
            ser.write(data2send)
            data2send = dataFile.read(size2read)
            dataFile.close()
            ser.write(b"!!")
        ser.close()
            self.status['text']='Trans Succes'
        except:
            ms.showerror('Error!','Trans Fail !')
```

曼徹斯特編碼

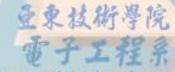

亞東技術學院電子工程系

曼徹斯特編碼是一種線路碼,它用電壓的變化來分辨1和0,從 電壓高態到低態的變化代表0,從電壓低態到高態的變化代表1 ,編碼後的工作週期是50%,相較於編碼前可以加強可見光閃 爍的頻率。

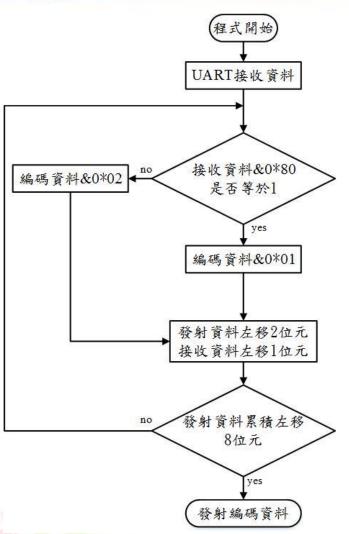

曼徹斯特發射

Priental Institute of Technology

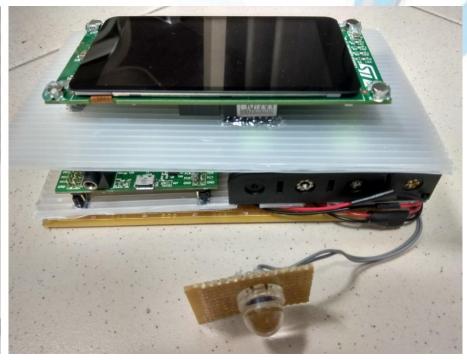

```
void manchester_encode(char RxData)
          kk = RxData;
   for (k = 0; k < 2; k++)
       encoded = 0; // manchester encoded byte
       for (j = 0; j < 4; j++)
                               encoded <<= 2;
                               if (kk & 0x0080)
                                                    //kk & 0b 1000 0000
                                         {encoded |= 0x01;} //manchester 1
                               else
                                         {encoded |= 0x02;} //manchester 0
                                         kk <<= 1;
                               USART_SendData(USART3,(uint8_t) encoded);
                               while (USART_GetFlagStatus(USART3, USART_FLAG_TC) == RESET);
                    USART_ClearFlag(USART3,USART_FLAG_TC);
                    USART_ClearFlag(USART1,USART_FLAG_TC);
                    encoded=0;
                    kk=0;
```
